

QueryGuard

Take Control of Your Query Data

IMPAXX's QueryGuard is a customizable plan that helps keep you ahead of your MSP obligations to Part C and D plans. We work with you to help avoid the pitfalls of unresolved liens.

As of December 11, 2021, the PAID Act requires the Centers for Medicare & Medicaid Services (CMS) to return the last three years of Part C and Part D plan history when identifying a beneficiary in the query process. This data is delivered via your monthly Query Response File.

Stay Ahead of Your Obligations

With QueryGuard, the IMPAXX team works with you to:

- Use query data to contact Part C/D plans and notify them of a primary payer
- Resolve any resulting liens and address any communication received from Part C/D plans
- Maintain copies of all correspondence for file documentation
- Conduct training on the PAID Act, how Part C/D recovery works, and how it is different from traditional Medicare Part A/B Conditional Payments

Reduce

Reduce the complications of unresolved lien scenarios

Settle

Settle claims more completely without leaving amounts owed to Part C/D plans

Establish

Establish a more comprehensive MSP compliance process

Did you know that Medicare Conditional Payments do not include recovery requests for Medicare Part C and D? If you are not communicating with Part C and D plans, you may settle a claim with unresolved liens and create additional steps that could have been avoided.

Contact us today to find out how we can help you set up your own customized QueryGuard program.
